BF4 Series

High reliability of fiber optic amplifier for convenient mounting

**Features**

- High speed response: Max. 0.5ms
- Auto sensitivity setting (Button setting) / Remote sensitivity setting
- External synchronization input, mutual interference protection, self-diagnosis
- Reverse power polarity and short-circuit (Overcurrent) protection circuit
- Timer function: Selectable None / 40ms OFF Delay timer (fixed)  
  (Standard type, remote sensitivity setting type only)
- Automatically selectable Light ON / Dark ON
- Precise detection of small target and complicated place to install

⚠️ Please read “Caution for your safety” in operation manual before using.

**Response frequency**

- Max. 0.5ms (Frequency 1), Max. 0.7ms (Frequency 2)

**Power supply**

- 12-24VDC ±10% (Ripple P-P: Max. 10%)

**Current consumption**

- Max. 45mA

**Light source (modulated light)**

- Red, Green

**Sensitivity adjustment**

- Sensitivity adjustment button (ON/OFF)

**Operation mode**

- Automatic selection of Light ON / Dark ON accordance with button setting

**Control output**

- NPN or PNP open collector output  
  - Load voltage: Max. 30VDC  
  - Load current: Max. 100mA  
  - Residual voltage - NPN: Max. 1V (load current: 100mA), Max. 0.4V (load current: 16mA) / PNP: Max. 2.5V

**Self-diagnosis output**

- ON state under unstable sensing (When the target stays for 300ms in unstable area),  
  ON state when control output short-circuited  
  - Load voltage: Max. 30VDC  
  - Load current: Max. 50mA  
  - Residual voltage - NPN: Max. 1V (load current: 50mA), Max. 0.4V (load current: 16mA) / PNP: Max. 2.5V

**Protection circuit**

- Reverse power polarity, short-circuit (overcurrent) protection circuit

**Indicator**

- Operation indicator: Red LED, Stability indicator: Green LED ON when the target stays in stable sensing level

**Input of stop transmission function**

- Built-in

**External synchronization function**

- Built-in (Gate/Trigger)

**Remote sensitivity setting function**

- Built-in

**Interference prevention function**

-Built-in differential frequency mode (set by frequency 1 or 2 by ON/OFF button)

**Timer function (selectable)**

- Built-in OFF delay timer, Approx. 40ms fixed  
  - Built-in OFF delay timer, Approx. 40ms fixed

**Ambient illumination**

- Sunlight: Max. 11,000lx, Incandescent lamp: Max. 3,000lx (Receiver illumination)

**Noise resistance**

- ±240V the square wave noise (pulse width: 1μs) by the noise simulator

**Dielectric strength**

- 1,000VAC 50/60Hz for 1 minute

**Insulation resistance**

- Min. 20MΩ (at 500VDC megger)

**Vibration**

- 1.5mm amplitude or 300m/s² at frequency of 10 to 55Hz (for 1 min.) in each of X, Y, Z directions for 2 hours

**Shock**

- 500m/s² (approx. 50G) in each of X, Y, Z directions for 3 times

**Environment**

- Ambient illumination
  - Sunlight: Max. 11000lx, Incandescent lamp: Max. 3000lx (received illumination)
- Ambient temperature
  - -10 to 50°C, storage: -20 to 70°C
- Ambient humidity
  - 35 to 85% RH, storage: 35 to 85% RH

**Material**

- Case: Heat-resistance ABS, Cover: PC

**Cable**

- Ø4, 4-wire, Length: 2m (AWG22, Core diameter: 0.08mm, Number of cores: 60, Insulator out diameter: ø1.25mm)
- Ø4, 6-wire, Length: 2m (AWG24, Core diameter: 0.08mm, Number of cores: 40, Insulator out diameter: ø1mm)

**Accessory**

- Mounting bracket, Bolts/nuts

**Approval**

- CE

**Unit weight**

- Approx. 65g

※1: Frequency 1 (Normal mode): Max. 0.5ms, Frequency 2: Max. 0.7ms
※2: The temperature or humidity mentioned in Environment indicates a non freezing or condensation environment.

BF4 Series

Dimensions

- Connect the bracket
- Bracket

Installations

Mounting amplifier unit
- When mounting the amplifier
  ① Hook the front part of the amplifier on DIN rail (or bracket).
  ② Press the rear part of the amplifier on DIN rail (or bracket).

- When releasing the amplifier
  Push the back of amplifier toward ③ and lift the hole for fiber toward ④ up then simply take it out without tools.

Installation of fiber optic cable
- In case of using L bracket
- In case of using screw

Connection of fiber optic cable & amplifier

Connection of fiber optic cable & amplifier

Parts description

- BF4R-E / BF4G-E
Fiber Optic Amplifier

Setting mode

Change the mode selection switch to SET.

Sensitivity setting

Light ON

Press [ON] button at light ON

Press [OFF] button at light ON

Press [ON] button at light OFF

Press [OFF] button at light OFF

STAB indicator flashes one time when the difference of sensitivity between ON and OFF is enough, but STAB indicator flashes 5 times when the difference is not enough.

Set the mode selection switch to LOCK (Completes setting).

Setting interference protection function

Press ON+OFF at the same time for 2 sec.

STAB indicator flashes continuously.

Cancellation of interference protection function (Normal mode)

Select the frequency 1

Select the frequency 2

Press [ON], [OFF] buttons at the same time (Normal mode, Response time : Max. 0.5ms)

Press [ON] button (Frequency 1, Response time : Max. 0.5ms)

Press [OFF] button (Frequency 2, Response time : Max. 0.7ms)

STAB indicator turns off.

Sensitivity adjustment

Adjustment by the sensitivity setting button (Common)

- Light ON

The control output turns on at Light ON status and turns off at Light OFF status.

</tbody>
</table>

- Dark ON

The control output turns off at Light ON status and turns on at Light OFF status.

<How to set sensitivity>

Most of adjustments except ③ & ⑤ are same as Light ON mode.

- ③ state

- ⑤ state

※1. The sensitivity can be set at unstable sensing area.
※2. When the power is OFF, the set sensitivity is saved.
※3. After completing sensitivity setting, do not move or bend fiber cable. It may not detect it properly.
To set as max. sensitivity (Common)
1. Execute the general sensitivity setting.
2. Set the mode selection switch to [SET] mode.
3. If there is no sensing target,
   - Light ON: Press the [ON → OFF] button
   - Dark ON: Press the [OFF → ON] button
4. Set the mode selection switch to [LOCK] mode.
※External sensitivity setting
- Light ON (From above ③)
  External sensitivity setting ON input (High → Low → High)
- Dark ON Mode (From above ③)
  External sensitivity setting OFF input (High → Low → High)

<Application>
• To extend sensing distance by the diffuse reflective type:
  If fiber optic sensor is used in place where there are targets with high reflectivity and low reflectivity, it is able to get stable detection by adjusting max. sensitivity.
• When it is used as transmitted beam type at bad environment:
  If fiber optic sensor is used in place where there is lots of dust or moisture, it might cause malfunction.
  Please max. sensitivity then it can perform stable detection.

Remote sensitivity adjustment [BF4R(G)-R]
BF4R-R/BF4G-R type can adjust the sensitivity with input signal lines regardless of the mode selection switch as following diagram:

Adjustment at Light ON
• ON input of remote sensitivity setting (SW1): SW1 turns on and then turns off instead of ③ state of adjustment by the sensitivity setting button.
• OFF input of remote sensitivity setting (SW2): SW2 turns on and then turns off instead of ⑤ state of adjustment by the sensitivity setting button.

Adjustment at Dark ON
• OFF input of remote sensitivity setting (SW2): SW2 turns on and then turns off instead of ③ state of adjustment by the sensitivity setting button.
• ON input of remote sensitivity setting (SW1): SW1 turns on and then turns off instead of ⑤ state of adjustment by the sensitivity setting button.

External sensitivity setting input signal condition>

<table>
<thead>
<tr>
<th>State</th>
<th>Signal condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>
<td>4.5-30VDC or Open</td>
</tr>
<tr>
<td>Low</td>
<td>0-1VDC</td>
</tr>
</tbody>
</table>

※Input impedance: 10kΩ

Prohibition of inputting External sensitivity setting [BF4R(G)-R]
Even though mode switch is at Lock position, it is able to input external sensitivity setting when Switch1 and Switch 2 are ON. Therefore please install Switch3 in order to prevent from malfunction as below.
※SW3 - OFF: Disable to set external sensitivity
※SW3 - ON: Enable to set external sensitivity

Answer Back function [BF4R(G)-R]
When ON or OFF input of remote sensitivity setting is applied, after 300ms, self-diagnosis output turns on for 40ms and then the sensor keeps normal sensing state.
(Note: Time chart)
※Self-diagnosis output does not turn on if there is no difference of sensitivity between ON input and OFF input and stable sensing is not executed, but stable sensing operates after 340ms.

Time Chart: Light ON mode

During period T3 (Approx. 300ms), do not change the light ON value by moving the object, etc.
1. T1 ≥ 1,000ms (After power turns on, it can be set after 1sec.)
2. T2 ≥ 5ms (ON or OFF input time of remote sensitivity setting must be min. 5ms)
3. T3 = 300ms (When ON or OFF input of remote sensitivity setting is applied, self-diagnosis output turns on after 300ms)
4. T4 = 40ms (ON time of self-diagnosis output)
5. T5 ≥ 500ms (When ON input of remote sensitivity setting is applied and then apply OFF input of remote sensitivity setting after 500ms)
**OFF Delay timer function**
(BF4R/BF4RP/BF4R-R/BF4G/BF4GP/BF4G-R)
Standard type and Remote sensitivity setting type both contain a built-in approx. 40ms fixed OFF Delay timer. The timer works when the timer selection switch is set to ‘OFD’. The output is turned off after remaining on for additional 40ms at OFF position of the sensing output. It is useful when the response time of the connected device is slow or when the sensing signal from a tiny object is too short.

  - **ON**
  - **OFF**

**External synchronization input function [BF4R(G)-E]**
By using external synchronization function, the time for making sensing can be specified by external synchronization. Trigger synchronization and gate synchronization are available.

**Stop transmission function**
[BF4R(G)-E]-Operation test
- Below test is available under Light ON state only.
- If input of stop transmission is at Low state, transmission light will be stopped.
- It can check normal or abnormal state of the sensor without moving the target.

![Diagram showing the stop transmission function](image)

**<Input signal condition for External synchronization>**

<table>
<thead>
<tr>
<th>State</th>
<th>Signal condition</th>
</tr>
</thead>
<tbody>

※T≥0.5ms
(using interference prevention function: T≥0.7ms)
※(Note) Actual signal detected by sensor.
BF4 Series

Self-diagnosis function (Common)
When fiber hood is contaminated by dust, transmitted light is lowered by element ability loss or received light is lowered by missing of optical axis, the self-diagnosis output will turn on.

※ Light ON mode

Interference prevention function (Common)
BF4R series has interference prevention function, two fiber optic cables can be mounted very closely by setting different transmission frequencies.

- Interference prevention function (Operation of differential frequency mode)

First sensor- Frequency 1 (Response time: max. 0.5ms)

1. Set the mode selection switch to [SET].
2. Press the [ON] & [OFF] buttons for 2 sec. at the same time.
3. The [STAB] indicator flashes continuously.
4. Press the [ON] button.
5. The [STAB] indicator turns off.
6. Set the mode selection switch to [LOCK].

Second sensor- Frequency 2 (Response time: max. 0.7ms)

1. Set the mode selection switch to [SET].
2. Press the [ON] & [OFF] buttons for 2 sec. at the same time.
3. The [STAB] indicator flashes continuously.
4. Press the [OFF] button.
5. The [STAB] indicator turns off.
6. Set the mode selection switch to [LOCK].

- Interference prevention function (Operation of normal mode)

1. Set the mode selection switch to [SET].
2. Press the [ON] & [OFF] buttons for 2 sec. at the same time.
3. The stable indicator flashes continuously.
4. Press the [ON] & [OFF] buttons at the same time.
5. The [STAB] indicator turns off.
6. Set the mode selection switch to [LOCK].

※ When interference prevention function is used, hysteresis & response time will be longer than normal operation (Response time: Max. 0.5ms).
